Sparkle

LIQUID PRESOAK FOR SILVERWARE & FLATWARE

DESCRIPTION:

SPARKLE is a concentrated liquid presoak detergent and de-tarnishing agent. It removes tough food soils from stainless flatware or silver. It is reddish brown in color with a pH of 13.

WHAT DOES IT DO?

SPARKLE removes tough food soils from stainless flatware or silver such as egg yolk, dried on ketchup, berry soil and others.

WHY IS IT USED?

Special electrochemical conversion ingredients allow tarnish or smut to be removed safely from your fine silver. Just soak as directed in a solution containing a source of clean aluminum. Your stainless and silver will shine as never before!

HOW IS IT USED?

Stainless Flatware: Prepare a very hot water solution containing 1 to 2 ounces of SPARKLE per gallon of water in a dishpan. Soak flatware for several minutes in the solution, sort and place stainless in utensil cups and cycle through your dishwasher.

Silverware: Line a dishpan with clean aluminum foil or place clean, de-tarnishing plates in the bottom. Prepare a solution of 1 to 2 ounces of SPARKLE per gallon of very hot water in a dishpan. Immerse silverware completely in solution and allow to soak for several minutes. Remove and rinse thoroughly, place in utensil cups and cycle through your dishwasher.

PACKAGING:

SPARKLE is available in closed loop, 1 gallon and 5 gallon containers.
