

#0173

De-Sudz

SILICONE ANTI-FOAM AGENT

DESCRIPTION:

DE-SUDZ is highly concentrated and is used to eliminate or prevent foam and suds. It quickly penetrates and breaks down bubbles. No solvents, caustics, acids or fumes.

WHAT DOES IT DO?

DE-SUDZ is a silicone based defoamer formulated to effectively control foam generated during carpet extraction cleaning. Eliminating foam ensures optimum vacuum pressure. Compatible with all commonly used cleaning solutions. DE-SUDZ is versatile – for use in commercial, home and rental carpet extraction machines, municipal wastewater treatment plants and digestion tanks.

HOW IS IT USED?

For Use in Wet Vacs and Carpet Machines:

Add equal parts of #173 DE-SUDZ and water to cover bottom of recovery tank. This will eliminate any suds or foam build-up.

For Municipal Use:

This concentrate anti-foam product is designed for use in private or municipal wastewater treatment plants. Special silicone de-foaming agents control foam and scum blankets due to detergents, surfactants, and organic materials, regardless of the pH of the system.

For Wastewater Treatment:

Drip into waste stream immediately prior to foam accumulation of digester. Application rates range from 10 to 50 ppm.

To Eliminate Heavy Scum Blanket in Digester:

Spray a light mist over the foam with a portable sprayer. Once scum blanket has been reduced, continue with drip feeding into waste system.

PACKAGING:

This product is available in 4-1 gallon case.
