Plastic & China Destainer

OXYGEN BASED PRE-SOAK & DESTAINER

DESCRIPTION:

PLASTIC & CHINA DESTAINER is a white, low foaming, free flowing powder with a pH of 10.8-11.8.

WHY IS IT USED?

PLASTIC & CHINA DESTAINER is a specially designed destainer for plastic, china, stainless steel and all kitchenware. Rapid wetting action penetrates into pores of tableware and releases powerful oxygen destaining agents. Coffee, tea and other food stains have no chance against this highly active product.

HOW IS IT USED?

Use 1 ounce per gallon, pre-dissolve in HOT water (120°-140°F). Mild agitation to the solution aids the stain removal action.

COFFEE AND TEA MAKING UNITS: Pour into place as if ready to start normal operation. Run through regular cycle, brush sight glass, faucets, spouts and crevices; drain, rinse well and sanitize.

JUICE UNITS: Be sure refrigeration is "off" and unit is at room temperature before adding solution; follow above procedure. After sanitizing, turn on refrigeration and return unit to normal service.

EATING UTENSILS: Immerse utensils completely in solution and soak until food stains disappear. Rinse thoroughly with clean water and sanitize.

PACKAGING:

This product is available in 4/3.7 lb. cases.
