

Solutions for a Cleaner Environment

TOP SCRUBBING FLOORS

1. Gather equipment.

2. Remove entrance mats and dust mop the floors.

3. Wear proper personal protective equipment.

4. Place wet floor signs at entranceway to room/area that is being top scrubbed.

5. Mix the appropriate degreaser to the proper dilution.

6. When rotary scrubbing, apply the cleaning solution liberally on the floor with a mop. Allow 5+ minutes dwell time. Use a clean green or black pad with a 175rpm machine.

7. When using an autoscrubber, use the double scrub method with a green or black pad; autoscrub with the vacuum off, then autoscrub with the vacuum on and solution turned off.

8. Flip or change the pad as needed.

9. Flood rinse the floor using a mop bucket with clean water. Extract water with wet/dry vac or autoscrubber, or manually with mop bucket (change the water frequently).

10. After the floor is dry, apply 2-3 coats of finish.
